## **OVERALL DESCRIPTION:**

The Charles Davis property consists of six parcels totaling 513.5 acres (ACPA) in size. It is located around 2 miles northeast of Mill Creek Preserve in northwestern Alachua County, approximately 1.2 miles south of the boundary with Union County. The property is in the Santa Fe River Alachua County Forever Project Area. The property has been nominated by the landowner for consideration as a conservation easement.

The property does not currently share a boundary with any ACF Preserves, but it does share approximately 0.5 miles of boundary with the Hitchcock Conservation Easement which lies to the north and west of this property and is on the Active Acquisition list, and currently under contract for acquisition. It does not share boundaries with any other existing conservation lands. In total, the parcels have approx. 1.4 mi of public road frontage (total) along NW 270

I:\Land Conservation\Land Conservation Matrix\Santa Fe River\SFR site specific evaluations\Davis, Charles and Roger\Charles Davis – Prepared by Emily Uhlmann 10/28/2021

Ave., NW 107 St., and NW 278 Ave. The property is an active farm and is almost entirely used for agriculture – cattle, row crops, and hay, and formerly for tobacco production and as a dairy. In seeking a conservation easement, the landowner desires to protect the property as a farm. It is the owner's intent to continue using the property for this purpose in the future in a similar manner to present operations, including center pivot irrigation and fertilizer application for specified crops. There a couple mobile homes on site as well as several buildings, sheds, other structures, and equipment related to the current and past operation of the farm.

Wetlands on the property include a couple small basin swamps in fair condition north of the shop complex as well as several farm ponds. A portion of West Hasan Creek historically flowed north through the western-most parcel of this property. At present, based on aerial imagery, it appears that the majority of the creek flow from the south terminates in a pond at the southwest corner of the Charles Davis property. During periods of heavy rainfall or high water, it is likely that the water would flow north through this property in a shallow depression that was historically the creek bed. The property includes rolling topography with elevation changes ranging from 156ft to 74ft above sea level. Elevation changes coupled with site alterations has resulted in significant erosion issues in places which has been addressed through installation of ditches and catchment ponds. The southeastern most 40 acre block has seeps in three locations, and a set of tiered ponds now capture the water from the seeps.

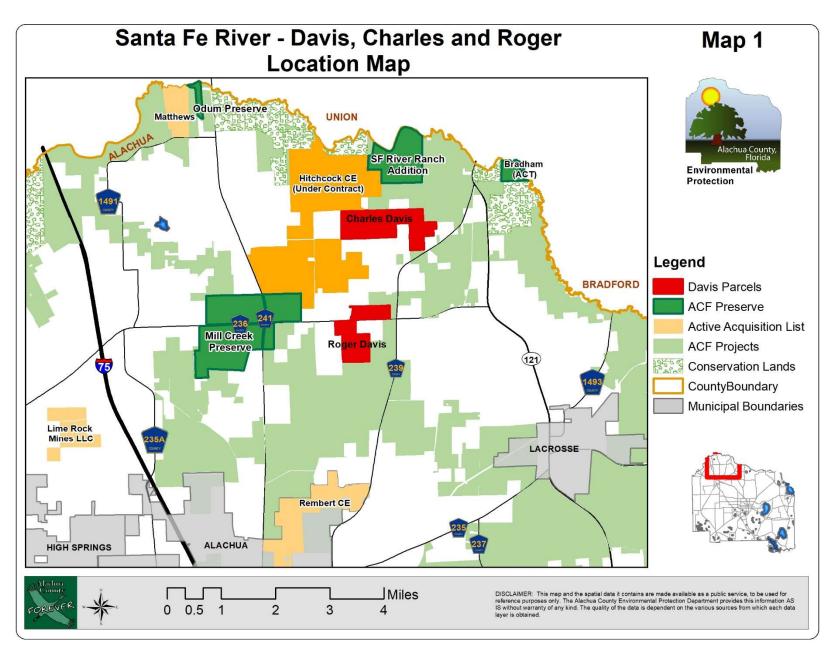

Exotic invasive plants observed on site included tropical soda apple and Chinaberry in low numbers. There are no active bald eagle nests on site or within one mile of the property according to the FWC database. There are no documented historic resources present on the property, but there is one small undocumented historic cemetery. The landowner has been in contact with some community members about maintaining the graves, but as far as we know, no formal documentation of the site has occurred. Outside of the property, there are eight historic structures, two historic cemeteries, and three archeological sites documented within one mile.

## **DEVELOPMENT REVIEW:**

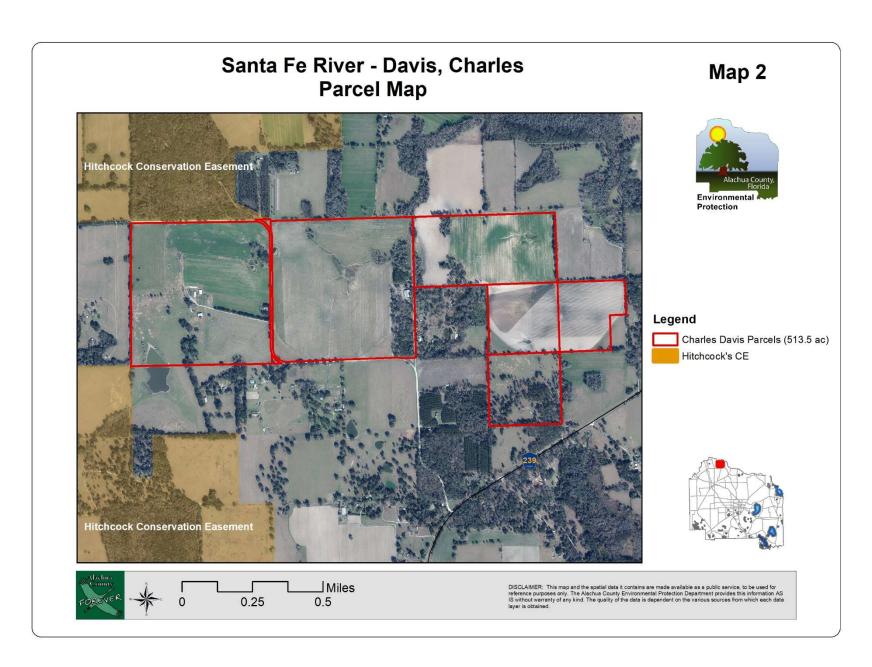

This development analysis is based on a limited desk-top review and is founded upon current County Land Development Regulations and Comprehensive Plan policies. The Development Scenario is oversimplified, and is meant only to convey a general sense of the potential of development intensity that could be possible based on land use and zoning conditions.

The parcels are zoned Agriculture (A) and have a Land Use designation of Rural/Agriculture. Based on the existing zoning, which allows for 1 unit per 5 acres, an estimated 102 residential units could be built within the total 514 acres. The locations and configurations of the wetlands, wetland buffers and 100-year floodplain would not restrict the potential of this many residential units. However, the remote location from communities, limited availability of infrastructure, construction costs and lack of residential market conditions in this vicinity would limit the development potential for this subject site.
