Emergency Circumstances (Type In Your information for Printing): On December 3, 2020, a car crash occurred in which the structure to a traffic control signal was damaged. Temporary measures were completed to shore up the structure while an engineering evaluation to the remaining structure was completed. Evaluation has been completed and materials and equipment have been identified for the permanent repairs. A quote has been obtained from the vendor who completed construction on the structure in the summer of 2020, in order to save costs and expedite the signal's reconstruction. There is a 6 to 8 weeks lead time for the signal concrete pole. Time is of essence.

Recommended Action (Type In Your information and Print): Cut emergency purchase order to make permanent repairs to restore structural integrity of the signal so that it can function properly once again.
